

PORTA-BASE®

Versatile, reliable and easy to transport, REID's PORTA-BASE is the perfect no-socket solution.

Chain Block

Manual chain block CBxxx-360°, rated WLL 500kg. Complete with 3.0m of load chain and 2.5m hand chain.

The Chain block has unique design for operation of block at any angle to the load, allowing safe operation from the side of the load rather than the traditional system (requiring the chain to be pulled from directly underneath the chain block). A load chain container, additional load chain and additional hand chain can be supplied if required.

Now with **Overload Protection** option!

A range of alternative lifting devices are available for integration into PORTA-BASE solution, including manual chain blocks and winches as well as electrical and air hoists. Please discuss your overall requirements with REID Lifting.
