

# PORTA-QUAD®

Ultra lightweight, stable lifting structure with rapid assembly.

## Options for the PORTA-QUAD family

### Chain Block

Manual chain block CBxxx-360°, rated WLL xxxkg. Complete with 3.0m of load chain and 2.5m hand chain.

The Chain block has unique design for operation of block at any angle to the load, allowing safe operation from the side of the load rather than the traditional system (requiring the chain to be pulled from directly underneath the chain block). The unit has minimum hook to hook dimension of 335mm and weighs 13kg in total. A load chain container, additional load chain and additional hand chain can be supplied if required.

Now with **Overload Protection** option!

A range of alternative lifting devices are available for integration into PORTA-QUAD lifting solution, including manual chain blocks and winches as well as electrical and air hoists. Please discuss your overall requirements with REID Lifting.

### Training

Safe assembly, handling and maintenance training for all systems at REID's Chepstow manufacturing facility, or at the client's premises. Up to 10 attendees per ½ day session, includes training materials.

Such training is often required for Health and Safety, IIP and quality management systems compliance, as well as ensuring maximum efficiency in the use of our systems and the wellbeing of the users.
